Global e-commerce Logistics 2016

Ti’s annual analysis and market overview of the global e-commerce logistics industry. The report contains Ti’s bespoke market size and forecasting data, as well as overviews of some of the world’s leading e-commerce businesses, such as Alibaba and Amazon. In addition, the report includes company profiles of both post offices, LSPs and dedicated e-commerce solution providers to showcase the different strategies shaping the market we know today.
About Logistics Executive

Logistics Executive is an International Specialist Executive Recruitment and Business Consulting Company.

Our integrated business approach linking Business Performance to Talent Management and ability to leverage our rich knowledge of business dynamics across international markets ensures we have a strong reputation as a trusted partner, providing strategic and operationally sound advice to our clients in the Supply Chain, Logistics, Manufacturing, Retail, FMCG, Transport, Freight, Aviation, Pharma-Healthcare and Resources sectors.

1.0 Introduction

2.0 e-commerce market overview

3.0 Supply Chain profiles

4.0 Logistics provider profiles

5.0 e-commerce logistics market size

6.0 The future of e-commerce logistics

7.0 Appendix
1.1 Key findings

• Amazon will continue to dominate the e-commerce market because customers choose its cheap and convenient delivery over other retailers’ offerings

• Online marketplaces and the adoption of omnichannel strategies mean the distinction between B2C and B2B markets has become blurred

• The replication of B2B by B2C could guarantee higher levels of delivery success, but this is only part of the solution

• Changes in consumer demand have prompted retailers to invest in IT and fulfilment centre networks to link bricks & mortar to online, mobile and social media offerings, as well as embracing showrooming and concept stores

• Traditional seasonality has changed markedly, with savings days such as Singles Day (which now dwarfs Black Friday and Cyber Monday) meaning it is not just the Christmas volume surge that retailers and logistics companies need to handle

• Alternative payments overtook card payments for the first time in 2014. This shift is expected to continue, driven by North America

• Technology failure and cyber-attacks are a bigger threat than adverse weather, fire and social unrest. Intellectual data is a critical supply chain asset and, within B2B, is among the primary targets for such security breaches

• Logistics and supply chains need to respond to the challenges created by the evolution of the sharing economy business model

• Technology means that consumers now have exposure to better prices, product availability and choice from outside of their country of residence

• E-commerce growth is rocketing in emerging markets and even developed markets are displaying double digit growth. However, there are various challenges that logistics providers need to surmount before they can take full advantage of this trend.
1.2 Executive summary

From its inception as an online book retailer, to being the world’s biggest e-commerce company, Amazon’s influence and control over the sector has been almost absolute. Logistics service providers (LSPs) have profited from aligning themselves with the e-commerce giant’s rapid growth. However, as both Amazon and customers evolve, LSPs risk being left on the shelf. As consumers continue to place their items in Amazon’s basket in ever-increasing numbers, LSPs simply cannot afford to cut ties with the e-commerce giant without losing significant volumes.

In addition, consumer expectation for ‘free’ delivery creates a damaging hurdle, as expectations are out of line with the economic reality of delivery. Somebody needs to pay for delivery and, more often than not, it is the delivery company that loses out. In the longer term there are means to get around this. One option might be to change delivery methods in line with consumer demand: convenience, in the form of guaranteed delivery to a safe place and subsequent collection at a convenient time, is increasingly more important to consumers than instant delivery, particularly if that option is also ‘free’. An alternative strategy could be to raise your prices. However, in an industry full of start-ups, it is easy to lose your competitive edge.

Similarly, the role of technology continues to hold significant sway. New ways for consumers to track and interact with deliveries, an increase in omni-channel adoption amongst retailers, the growth of wearable warehouse technology and growing fears about cyber-attacks are just a few of the ways in which technology will change the landscape of the sector dramatically in the next few years. Those LSPs who are able to work with retailers to create the most efficient and cost-effective services will be the ones who prosper. Others will find themselves shelved.

Regardless of who is winning the race for volumes and profits, consumers continue to spend and the e-commerce logistics market continues to grow. Ti has estimated a global growth rate of 20.9% year-over-year in 2015, driven primarily by growth in China’s e-commerce logistics market. China has relaxed its policies on online imports of late, with duty charged on small online purchases from abroad now lower than the tax charged on domestic purchases in China. China has also established free-trade zones in nine cities, where parcels from overseas move through customs faster than before.

E-commerce logistics growth is also being propelled by the increased connectivity of consumers through m-commerce and the ‘Internet of Things’. Technology also means that consumers now have exposure to better prices, product availability and choice from outside of their country of residence. Retailers and logistics providers have been reacting to this increase in demand in a number of ways:

- Japan Post has responded to the expansion of the e-commerce market by developing new services and acquiring Toll Holdings Limited
- UPS has developed its cross-border e-commerce services, offering consumers in 100 countries the ability to shop online in the US and UK as if they were shopping in their own country
- XPO Logistics has developed a presence in e-commerce logistics via acquisition and serves customers through its Last Mile and Logistics Divisions.

However a company establishes success in e-commerce logistics, the prospects for continued success know no bounds.
2.1 e-commerce market overview

Amazon.com’s customers expect delivery options to be convenient and at a low cost. As long as consumers expect this, they will continue to choose Amazon over other retailers and it will continue to dominate the e-commerce market.

“If Amazon or other e-commerce players don’t get their product to you, as you the consumers expect to get it, you’re not going to go back to their website. It’s all about the selection, the price, the convenience and the customer experience; that’s what it’s about, that’s how Amazon competes.”

Alexsander M. Stewart, Managing Director, Transportation and Logistics, Stifel Investment Banking,

“The future of current last mile delivery solutions is non-existent. To give it a future, you need to make sure that every transport capacity becomes transferable, scalable, and can be adapted at no extra cost to the service the consumer wants, to enable a profit.”

Jerome Charlez, former strategy and marketing executive at GeoPost/La Poste
3.1 Supply chain profiles overview

“FastTrack, together with our now-proven store concession model and improvements in digital channels, drove increases in digital sales, digital participation and home delivery. I continue to believe that the capabilities being developed in the Argos Transformation Plan will position Argos as a retail leader in an increasingly digital future.”

*John Walden, Chief Executive, Home Retail Group*

“Europe is a very big market with lots of potential so we’re investing heavily. Customers are demanding different experiences. The upstream supply chain has to change.”

*Nick Beighton, Chief Executive, asos.com*

“We expect capital investments in e-commerce worldwide to be between $1.2 and $1.5bn next year, and these investments will include technology, infrastructure and other areas to support e-commerce and digital initiatives to serve customers.”

*Charles Holley, Executive VP and CFO, Walmart*

“We remain as confident as ever that the market dynamics are moving in our favour as a pure-play digital operator in a market where customers continue to move rapidly online.”

*John Roberts, CEO, AO.com*

“What’s changing is that the line between e-commerce and retail, online and offline, is blurring. Mobile technologies are causing that to blur, so, for us, we just see a much larger addressable market as digital technologies enable consumers to shop and pay in new ways at home, at work, and in the physical world.”

*John Donahoe, former CEO, eBay*

What do traditional and e-retailers expect for the future of e-commerce?

How are they adapting to changing consumer demand?

How does their supply chain compare with their competitors’?
4.1 Logistics provider profiles overview

**XPO Logistics** has developed a presence in e-commerce logistics via acquisition and serves customers through its Last Mile and Logistics divisions.

**SEKO** has grown its operations alongside its clients and boosted its e-commerce presence by improving its technical capabilities.

**ups** has developed its cross-border e-commerce services, offering consumers in 100 countries the ability to shop online in the US and UK as if they were shopping in their own country.

**FedEx** has improved its e-commerce service provision through targeted acquisitions and considers the segment to be of growing importance.

**UNITED STATES POSTAL SERVICE®** has introduced and continued various initiatives in 2015 to exploit the growth of e-commerce and grow its parcels business.

**Clipper** is significantly exposed to e-commerce through its relationships with retail and fashion blue chip clients.

**UP POST** has invested substantially in its express and parcel services to handle growth in e-commerce demand.

**Deutsche Post DHL** has demonstrated the importance of the e-commerce market by realigning its business to offer a ‘one-stop shop’ for e-commerce services across the world.

**Japan Post** has responded to the expansion of the e-commerce market by developing new services and acquiring Toll Holdings Limited.

**Yamato** provides delivery services to the two largest online retailers in Japan: Amazon and Rakuten.

**SF EXPRESS** has expanded geographically, opening offices and service stations, launching services in Asia, Europe and North America, and establishing partnerships in cross-border e-commerce.

**Singapore POST** has expanded geographically, through acquisition, as part of its strategy to be a regional e-commerce logistics leader.

**Australia POST** is building the infrastructure and digital assets needed to support the growth of Australian e-commerce.
“It is no secret that e-commerce logistics is growing considerably faster than other logistics markets – be it freight forwarding, contract logistics or express. Emerging market e-commerce growth is rocketing along and even most developed markets are growing in double digits. However, there are great challenges for logistics providers to surmount. For one, it is not clear that online retailers are increasingly outsourcing e-fulfilment operations: a huge slice of pie is being left in-house. By far the biggest obstacle, though, remains getting e-commerce logistics services, especially last-mile delivery, to generate sustained profits. Any provider which establishes a strong reputation in the field and finds a formula which yields a consistently decent margin is set for years of success.”

David Buckby, Economist, Ti
